

## LETTER OF RECOMMENDATION

It is a pleasure to get to know and work with Sharvay Chavan. He comes across as a hardworking, passionate, and dedicated young engineer. He is interested in every aspect of his work and strives for the highest quality and efficiency. I was the Senior Consultant - Technology at Tibco and worked for 12 years from Feb 2012 till November 2023. I have recently joined Cognizant as an Architect – Technology. Sharvay joined Tibco Software (Tibco was later renamed Citrix R&D after a merger with Citrix and subsequently renamed Cloud Software Group from Citrix R&D) in June 2022. He joined the data analytics and insights team as a Junior Consultant in August 2022. During his technology training in Python, SQL, and AWS, Sharvay quickly grasped the concepts and showed a keen eagerness to learn and acquire knowledge. Additionally, he cleared certification exams, including TCA TIBCO WebFOCUS and TCP TIBCO WebFOCUS.

Sharvay played a crucial role as a dedicated and highly skilled resource, serving as an offshore Data Analyst for one of the largest banks in the USA. His primary tasks included transforming raw data into actionable insights, interpreting and addressing customer requirements, designing end-to-end dashboards, constructing data preprocessing and transformation pipelines, and developing comprehensive reports and data visualizations. His proficiency extended beyond individual components to the development of complete end-to-end business intelligence solutions. In his first project, Sharvay worked with transactions and investment data. He single-handedly interacted with business users and developed ad hoc reports and dynamic dashboards tailored to specific requirements. He developed the entire workflow from scratch, creating the required data by analyzing and creating complex joins from multiple data sources including AWS Redshift, SQL, Oracle, and Snowflake. He wrote code to create reports and visualizations, leading up to the final deployment. Despite being a newcomer and lacking prior experience with production deployments, he executed the entire deployment process seamlessly. Subsequently, he made contributions to multiple projects, where he was actively engaged with diverse datasets and proficiently utilized a broad spectrum of technological tools such as Python and its various libraries, R, SQL, TIBCO WebFOCUS Reportcaster, Designer, App Studio, FOCUS programming language, AWS, Oracle, etc.

Sharvay showcased an excellent ability to work as an individual and as a part of a team and adapt well to changes in technology and the evolving work environment. Currently, he is working on developing a business intelligence portal, facilitating crucial analysis for business decision-making strategies. Sharvay has showcased great problem-solving, and analytical skills and has efficiently collaborated with cross-functional teams to achieve solutions and complete his tasks. He always meets deadlines and handles pressures coordinating multiple tasks in a project environment, contributing significantly to the team's overall effectiveness.

Sharvay adeptly managed his time, maintaining a harmonious balance between work and extracurricular activities. He actively participated in organizing diverse employee engagement events, showcasing his commitment to fostering a positive workplace culture. Beyond his professional commitments, Sharvay demonstrated his versatile talents by performing in various sports events, and cultural events.

Sharvay is a humble and respectful professional. He is diligent, committed, and dependable, and I am sure he will show the same spirit in his future studies. I wholeheartedly recommend Sharvay for admission to your esteemed Institution.

Thank you,

Rahul Nair
